01 · COMPANY AT A GLANCE

A Zambian-owned agribusiness, built from the field up

Insansu Venture grows indigenous crops and fresh vegetables at its farm in Chipongwe, Kafue, is establishing a presence in Luapula and Northern Provinces from a base in Kawambwa, and is building the aggregation, value-addition and market links that turn these crops into sustainable value chains.

We work across climate-smart production, aggregation, agro-processing and market development, with a focus on indigenous cereals and legumes, horticulture, nutritious foods and opportunities for smallholder farmers.

2024
Founded on 13 May 2024

100%
Zambian-owned and founder-led

2 bases
Kafue farm and Kawambwa office

4 links
Production to market, under one roof

WORKING FARM

Chipongwe, Kafue

Plot No. 10/10288MM, Chipapa/Chipongwe Area, Kafue. Crops in the ground today with drip irrigation and row planting.

EXPANDING

Kawambwa, Luapula

Office at Plot 3861, New Town, our base for Luapula and Northern Provinces. Aggregation and processing facility coming soon in the New Town industrial area.

OUR VISION

More of the value created by Zambia's own crops should stay with the communities that grow them.

OUR MISSION

One connected value chain

To build Zambian-owned agribusiness from indigenous crops and horticulture, linking climate-smart production, aggregation, processing and markets into one connected value chain.

Zambian-owned, community-rooted

Built and led from within Zambia, alongside the smallholder communities whose crops and knowledge underpin the business.

Climate-smart by default

Drip irrigation, mulching, intercropping and farm-made compost are chosen for resilience to a changing climate from the start.

Value that stays close to home

Holding aggregation, processing and markets together keeps more of a crop's value where it was grown.

Indigenous knowledge as an asset

Impwa, chibwabwa, katapa and kalembula are an economic opportunity, not a fallback.

02 · WHAT WE DO

From the field to the shelf

Rather than operating as a single-purpose trader or processor, Insansu holds four links of the value chain together, so growers have a buyer and processors have a steady supply.

1

Climate-smart production

We grow vegetables and indigenous crops at Chipongwe using drip irrigation and row planting, and support smallholder growers with practices suited to a changing climate.

2

Aggregation

We bring together produce from growers so quality and volume are consistent enough to serve processors and buyers reliably, with a new facility coming up in Kawambwa.

3

Agro-processing

We turn raw crops into market-ready products: peanut butter, composite flour blends, dried vegetables, onion powder, dried herbs, pickles and tomato sauce.

4

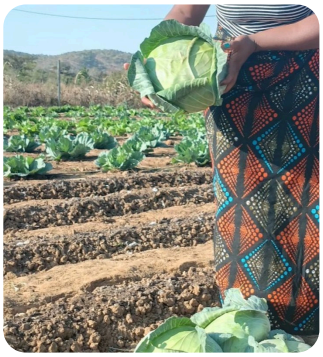

Market development

We connect finished products, and the growers behind them, to households, businesses and institutions in Kafue, Chilanga, Lusaka and beyond.

Who we serve

Households · Restaurants · Lodges · Traders · Retailers · Institutions

Where we sell today

Kafue · Chilanga · Lusaka · Luapula & Northern, next

03 · PRODUCTS

Fresh from our fields, and more on the way

We sell fresh produce from our own fields today and are developing seven value-added products from the same crops and from our growers' harvests.

Fresh produce

Available now

AVAILABLE

Cabbage

Intercropped and rotated with onions.

AVAILABLE

Onion

Also the base for our onion powder.

AVAILABLE

Cucumber

Early trials feed our pickles line.

AVAILABLE

Impwa

Traditional indigenous vegetable.

AVAILABLE

Tomatoes

Field-grown at Chipongwe.

AVAILABLE

Chibwabwa

Pumpkin leaves, grown for tender, nutritious greens.

BEING ADDED

Indigenous leafy vegetables

Katapa (cassava leaves), kalembula (sweet potato leaves) and cowpea leaves are joining the crop mix alongside chibwabwa.

Value-added range

Coming soon

Peanut butter

100% natural, no additives or preservatives.

Composite flour blends

Cassava, millet, sorghum and bean blends for nutrition.

Onion powder

Sun-dried and ground from our own onions.

Dried herbs

Basil, oregano, thyme, rosemary and mint.

Insansu pickles

Cucumbers and onions in our own spice blend.

Tomato sauce

Made from farm-grown tomatoes.

Dried vegetables

Sun-dried indigenous greens, ready to cook all year.

More products will follow as our growers' volumes increase.

04 · PROJECTS

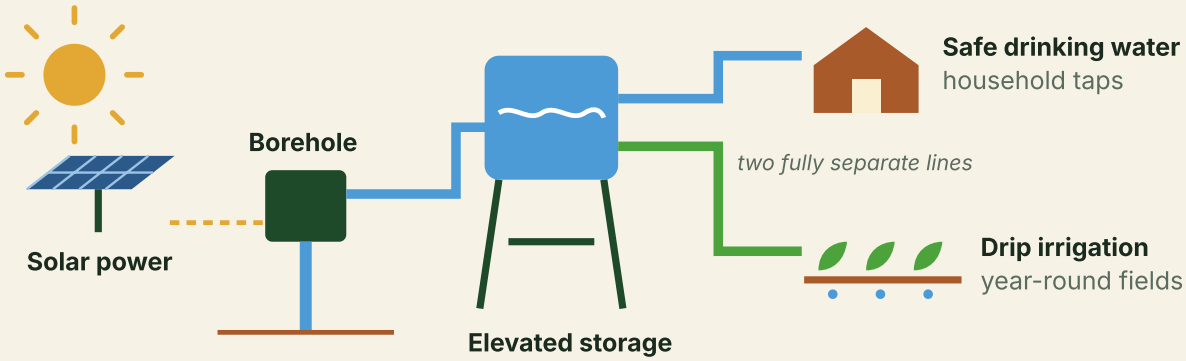

Five initiatives in the pipeline

One is starting up, one is coming soon, two are seeking funding and partners, and one is an early concept.

Solar-Powered Community Water and Irrigation Hub

SEEKING FUNDING

One model for three sites: Kafue (Lusaka Province), Kawambwa (Luapula Province) and Mpanda, Mungwi District (Northern Province). Chipongwe is the first site.

Lead households, with priority for women and youth, farm irrigated plots around a central anchor farm, sell through Insansu's aggregation, and mentor neighbouring farmers as the hub grows. Designs, scale and timing at each site depend on technical assessments and funding.

STARTING UP

Insansu Nursery

Chipongwe, Kafue

Raises seedlings in trays for our own fields and nearby smallholders. Healthy seedlings mean a more reliable harvest, and tie directly into the irrigation hub.

COMING SOON

Kawambwa Aggregation & Processing Centre

New Town industrial area, Kawambwa

Aggregates smallholder produce and processes it into peanut butter, composite flours and other products for Luapula and Northern Provinces.

SEEKING PARTNERS

Climate-Smart Indigenous Crops Project

Northern and Luapula Provinces · 24 months

Supports smallholder growers through production, then aggregates and processes their produce into peanut butter and composite flours.

EARLY CONCEPT

Insansu Homestead

Chipongwe, Kafue

Agritourism experiences that connect visitors to indigenous crops and climate-smart farming.

05 · WHY INSANSU

A working base, not a plan on paper

01
A working farm
Crops are in the ground at Chipongwe today, row-planted with drip irrigation, and sold fresh in Kafue, Chilanga and Lusaka.

02
An integrated model
Production, aggregation, processing and markets are planned together, so supply and demand meet.

03
Indigenous crops first
We build on crops communities already know how to grow and that suit the land.

04
Water as the foundation
The irrigation hub is designed to make production reliable season after season and bring safe water to homes.

05
A ready pipeline
Nursery, water hub, processing project and homestead give partners several points of entry.

06
Founder-led
Mubanga Mwansa combines sustainable farming, agro-processing and technology with indigenous knowledge systems.

06 · ROADMAP AND PARTNERSHIPS

How partners can help us take the next step

INITIATIVE	NEXT STEP	HOW PARTNERS CAN HELP
Fresh produce	Grow the buyer base in Kafue, Chilanga and Lusaka	Regular orders from restaurants, lodges, traders and institutions
Value-added products	Launch the seven-product value-added range	Processing equipment, packaging and retail or wholesale channels
Nursery	Scale seedling production for our fields and local growers	Technical support and seedling buyers
Water and Irrigation Hub	Secure funding and complete technical assessments for Kafue, Kawambwa and Mpanda	Funding, technical assessment and installation partners
Indigenous Crops Project	Secure funding and partners for the 24-month programme	Funding, farmer-training and processing partners
Insansu Homestead	Develop the agritourism concept	Tourism and hospitality partners
Kawambwa Centre	Bring the facility into operation	Funding, equipment, packaging and offtake partners

Final budgets, beneficiary numbers and timelines for the larger projects depend on technical assessments and funder terms, and are available on request.

LET'S WORK TOGETHER

Grow with us

We are looking for funders, buyers and technical partners to move each initiative to its next stage. We would be glad to hear from you.
